Part Wizard

Introduction

Part Wizard is a vehicle design utility plugin that adds a few conveniences when building your next strut/booster carrier.

- Provides a list of parts with part highlighting for easier identification.
- Allows deleting of parts from the list on eligible parts.
- Allows complete control of symmetry on eligible parts.
- Allows selecting parts for Action Group assignment.
- Shows either all parts or only those that are hidden from the editor's Parts List. (Helpful in finding obsolete parts when mod authors make updates.)
- Shows unavailable parts in career modes with options to buy one or all necessary parts for launch.

What's New

- Updated for KSP 1.1.3.
- Uses the new part highlighting capability introduced in KSP 0.90.
- Action Group support.
- Career mode part purchasing support.
- New icons with stock toolbar support.

Pics for Clicks *(Updated for 1.2.x)*

Downloads

Download from GitHub

Download from Curse

Source at GitHub

Supported Add-ons

Toolbar 1.7.12 (or later) **Direct**
NOTE: Optional as of 1.2.1.

Known Issues

- Use of the new editor gizmos will reset parts to their natural symmetric locations, including parts that have had symmetry edited. It is best to use the new gizmos to position your parts before editing/breaking symmetry.

Credits

blizzy78, for the Toolbar plugin that saves modders time and effort plus keeps your KSP decluttered.
sarbian, for reviewing Part Wizard and making suggestions (even though I haven't implemented them, yet!)
m4v, for allowing the use of editor locking code as a model for the feature in Part Wizard.
antgeth, for the feature idea that led to the Symmetry Editor.
Vlos, for the Action Group part selection idea.
Papa_Joe, for generously taking time to implement stock toolbar support. Many thanks!
linuxgurugamer, for updating to KSP 1.1.

License

The Part Wizard plugin is licensed under the terms of the BSD Simplified open source license.

Changelog

```
1.2.5 [22-Jun-2016] - Updated for 1.1.3, fixed loading toolbar preference when enter
1.2.4 [20-Apr-2016] - Updated for 1.1.
1.2.3 [ 7-Sep-2015] - Fixed bug in application launcher causing duplicating Part Wiz
1.2.2 [ 8-Jul-2015] - Updated for 1.0.4, fixed bug buying parts when one or more par
1.2.1 [11-May-2015] - New icons and stock toolbar support added.
1.2.0 [ 6-May-2015] - Updated for 1.0.2, new highlighting, Action Group support, car
1.1.2 [19-Dec-2014] - Updated for 0.90.
1.1.1 [ 8-Oct-2014] - Updated for 0.25, highlighting bug fix, ATM configuration adde
1.1.0 [ 6-Jun-2014] - Symmetry Editor, improved part highlighting, bug fixes.
1.0.0 [15-May-2014] - Initial public release.
```

Woot! This should be in the game.

This looks like it might be a suitable replacement for TAC Part Lister.

this looks totally great!

one request; i have no idea how plausible this is. in addition to breaking symmetry, is there any possibility of *reducing* symmetry? i.e. let's say i have 4x symmetry on a part. the press of a button it would convert it to two pairs of 2x symmetry.

Since this breaks symmetry this is actually a good way to get light pairs properly placed and then change their color independently.

Flying machine market has been very unsteady the past two days. Opened yesterday morning at about 208 (100% means even chance of success) but by noon had dropped to 110. These fluctuations would have produced a panic, I think, in Wall Street, but in this quiet place it only put us to thinking and figuring a little. — Orville Wright

Thanks everyone for the kind words, I'm excited to share my first (public) mod with the KSP community. I suppose it shouldn't be a surprise to see great things from this many "rocket scientists" yet I'm amazed daily at everyone's creativity and ingenuity.

I like this idea and I've added it to my list. I think it would be fairly easy to do as far as the basic operation of creating new symmetric groups from a pool of already-symmetric parts. The trick may be in how to know which parts end up as symmetrical pairs? Think of a circle with 4 points at 90 degrees, clockwise A, B, C and D. Does symmetry reduction make the pairs A & B, C & D, or A & C, B & D? I think either answer is valid, so then it becomes a matter of providing the UI to choose. At that point, you basically have complete symmetry control - which is fairly simple with an initial set of 4, but becomes much more interesting with greater numbers! (Starting with 5x symmetry, you could have 3-part and 2-part of any combination...)

Cool! I tested symmetry breaking with Procedural Parts because I couldn't think of a stock tweakable part. It should also make for some interesting possibilities with the latest Infernal Robotics. antgeth's idea of symmetry reduction also adds to this idea.

Great !! Finally I'll not take pieces of the thing I build when trying to remove tiny part or the ones with bad/weird collider (like the stock structural pylon) which is a big annoyance of the stock editor.

Yup. This is so fricking epic I'm going to have to suggest people to download this to 'break' symmetry on Infernal Robotic tweaks. You sir win the gold star!

Hmm, not at present. I'll put it on the list though, that'd be handy!

Do you know if there's any way to implement the new ppfx edge highlighting into your mod? that would be awesome.

Yes, I've already played with it. Expect to see it's appearance in the next update or so.
